Cement picture frame

WWW.RAYHER.COM

Used items:

- 34 152 000** Creative cement
36 008 00 Casting mould: Frame

Additionally you need:

- 89 530 00** Sandpaper set
37 103 00 Brush flat
61 217 31 Wooden craft sticks
Cooking oil, Paper towel, Box with sand

Instructions:

- 1 Start with placing the mould into the box filled with sand and oil the inside with cooking oil.
- 2 Fill a small plastic bucket with approximately 30 ml of water, afterwards add small portions of approximately 300 g of creative cement. Mix the mixture with a wooden crafting stick until the mixture is smooth and pourable.
- 3 Pour the mixture into the mould until it reaches the desired height (at best leave 1 cm to the top). Let the creative cement rest for 1 – 2 minutes, while carefully knocking against the mould, so that possible air bubbles can escape.
- 4 Let it fully harden. The curing time can vary, depending on the size and temperature (best let it harden over night). The bowl is completely hardened and can be used after 1 – 2 days.
- 5 Now the mould can be demoulded. Remove the cement object from its mould by turning it upside down and bending the upper edges slightly to the outside, thereby letting air in between mould and creative cement object. Carefully knock the mould onto a table, in order to loosen the cement bowl. If necessary, carefully knock the mould onto a table, to loosen the cement frame.
- 6 Smaller ridges and bumps can easily be removed by sand papering the cement candle holder.
- 7 If desired the frame can be sandpapered, painted or decorated with deco-metal.
