Cement-magnets

WWW.RAYHER.COM

Used items:

36 004 000	Casting mould „Coffee&Cake“	1 piece
34 166 000	Jewellery cement	250 g
89 217 00	Magnet 20 mm	16 pieces
61 216 31	Wooden craft sticks	4 pieces
69 078 000	Sandpaper	1 piece

Additionally you need:

Vessel to stir the cement, cooking oil, brush, colour for painting (e.g. DecoArt all purpose paint, Chalky Finish)

Instructions:

- 1 Coat the casting mould with a cooking oil and place it straight on the work surface. For a safe standing position, you could use a towel or a sand bed. Cut the wooden craft sticks into halves.
- 2 Now prepare the magnets for the purpose of a further application. Therefore, fix a wooden spatula between two magnets. One of the magnets is going to be poured into the cement molding, the other one is only required for preparation.
- 3 Stir 250 g of the jewellery-cement according to the package leaflet and pour it into the prepared casting mould. Notice that the level of the cement will later still vary by placing the magnet. Tap slightly on the molding so that any air bubbles can escape.
- 4 Then the prepared wooden spatula with magnets put on the casting mould and place it so that one of the magnets is embedded in the wet cement.
- 5 Allow to dry for 24 hours.
- 6 Remove the wooden spatula and the upper magnet. The cast object can now be removed by applying a slight pressure onto the back of the casting mould. Clean the casting mould thoroughly with a detergent.
- 7 You can use the sandpaper to remove unwanted unevennesses or small ridges from the cast object. Allow then the cast object to dry thoroughly and optionally paint it.
