Knotted test tube-traffic lights

WWW.RAYHER.COM

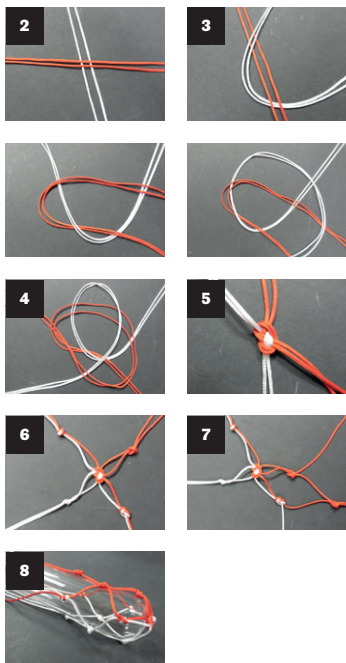

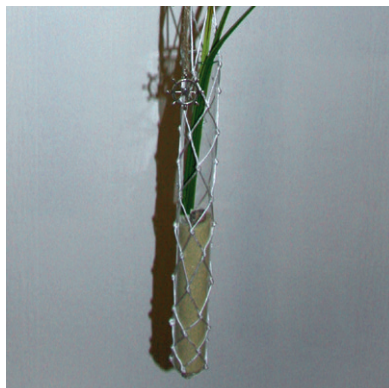

Used items:

56 109 00	Test tube 30 cm
88 013 00	Test tube 20 cm
88 012 00	Test tube 15 cm
89 569 02	Jewellery cord

1 piece

1 piece

1 piece

Instructions:

1 Cut the jewellery cord according to the size of the test tube:

Oversized test tube: 4 × 90 cm

Medium-sized test tube: 4 × 80 cm

Small-sized test tube: 4 × 50 cm

2 Arrange the 4 customized threads as shown in the picture.

3 Overturn unilaterally the two underlying threads over the two upper threads.

4 Overturn the threads as shown in the following pictures.

5 Pull together the threads into a knot.

6 Place the knot below on the bottom of the test tube and put always two threads per an overhand knot into a knot as shown in the picture (the distance from the basic knot to the further one varies according to the size of the object).

7 For the next row of knots, join again together two threads per an overhand knot, so that a diamond-shaped pattern is formed, see picture.

8 Continue like this until the desired height of the test tube is reached and all the threads per overhand knot finally knotted together.
