Wooden cacti put-up hinge

Used items:

62 812 000	Wooden cacti to put up, FSC 100%	1 set
38 000 428	All Purpose paint, leaf green	1/8 bottle
38 000 105	All Purpose paint, alabaster white	1/100 bottle
38 811 00	Magnetic primer	1/15 bottle
89 568 00	Magnet, 6 mm ø	3 pieces

Additionally you need:

37 104 00	Flat brush, synthetic no.16	1 piece
37 108 00	Round brush, synthetic no.1	1 piece
38 241 00	Paint sponge	1 piece

Instructions:

- 1 Wipe the cacti elements by means of the paint sponge and leaf green All Purpose paint. Once all of them have dried well out, plug the four single elements together, so that you get a big and a small cactus. Put the small cactus aside.
- 2 When it comes to the big cactus, coat one or more of its side elements with the magnetic primer. To do this, use, at best, the flat brush. Repeat this step twice up to three times in order to reach an intensive magnetic effect.

- 3 After 3 hours of the magnetic primer drying, you can paint it over with the leaf green All Purpose paint.
- 4 At the end, paint the spines on both cacti with the alabaster white All Purpose paint by means of the round brush. With the magnets, you can attach small memos and notes to the big cactus. Your Memoboard is ready!
