Small kneading-cement ball in folded optics

Used items:

34 212 000	Creative kneading-cement	3.8 kg
33 060 00	Styrofoam-ball 20 cm	1 piece
33 384 00	Glue for foil	
81 283 22	Mirror-foil, silver	
81 283 66	Mirror-foil, brass	

Additionally you need:

Container for kneading of the cement (e.g. bowl with poss. lid), disposable gloves, stable support e.g. the lid of a plastic bucket, PET spray bottle (item 38 798 000), brush, small container with water, stand for the styrofoam-ball (e.g. a can)

Instructions:

1 For a solid standing onto a stand, place the styrofoam-ball for example on a can. Thus the kneading-cement is not too dry, we recommend you to work it out in 2 sections. Always wear plastic gloves while working!

2 Mix a half of the creative kneading-cement (1.9kg) with water in the ratio 9:1 (9 parts of cement : 1 part of water). This corresponds to about 210 ml. Stir the water slowly, gradually add it while constantly kneading. Knead the crumbly mixture with damp disposable gloves (if necessary, moisten several times) until the desired consistency is achieved.

3 Take some cement between the palms, press it flat and coat thinly around a half of the styrofoam-ball.

4 Mould small pellets out of the remaining kneading-cement, tap them flat between the palms, mould them malleably and press them scale-like from the bottom up onto the circular worked-out with cement coated styrofoam-surface (poss. stop up the joints with your thumb).

5 The cement mixture should be smooth and easily malleable. If the cement is crackly during kneading, just sprinkle it with some water.

6 Let it dry over night.

7 The next day, turn the ball around, so that the free styrofoam-surface is facing upwards.

8 Repeat the mixing of the remaining kneading-cement as already described and coat the free styrofoam-surface as described for the first half. Damp the dry/fresh connection joints of the kneading-cement with a brush, so that the two layers bond well.

9 Decorate as well the second half as already above described in a sophisticated folded optic way. Here also work again top down.

10 Let it dry at least for 1 day.

11 Optionally, you can decorate the tips of the folds with silver and/or brass-coloured highlights. Therefor, spread some glue for foil on it by using the brush and let it dry clearly (it lasts at least 1 hour). Then decorate it with the mirror-foil according to the package instructions.

12 The entire drying period lasts for several days. After about 21 days the object is weatherproof.
