# Moulded Granoplast-bowl

### Used items:

- 34 494 00** Air-drying modelling compound, 400 g
- 21 715 22** Deco-metal flakes, silver
- 21 730 00** Deco-metal leaf adhesive
- 21 733 00** Deco-metal protective varnish
- 37 063 000** Set of deco-metal brushes

### Additionally you need:

Rolling pin, balloon, support stand (e.g. flower pot), cling film, some water

### Instructions:

- 1 For the preparation, you need a balloon inflated to the desired size and a support stand (e.g. flower pot) for the balloon.
- 2 Roll the air-drying modelling compound with granite sand look about 3mm thick out, at best in a cling film by means of a craft rolling pin.
- 3 Lay the rolled-out modelling compound flat on the balloon and model it further with fingers and some water.
- 4 Let it dry out for about 1 day (the drying time is dependent upon the weather conditions).
- 5 Then, take carefully the balloon out or release the air with a little prick and remove it. After one more day of drying process, the bowl can be painted and decorated as desired.

**Tip** the bowl looks particularly classy with an inner coating out of deco-metal. Therefore, apply the leaf adhesive onto desired surface by means of a brush, let it dry out and put then the deco-metal flakes on. Push them with a soft brush and wipe carefully the excess rest off. Finally, if desired, coat it with a protective varnish.
