# Marbled Eastereggs

[WWW.RAYHER.COM](http://WWW.RAYHER.COM)

## Used items:

- 39 055 00** Plastic egg, 6 cm
- 38 861 102** Marble Paint, white
- 38 861 576** Marble Paint, black
- 38 861 606** Marble Paint, silver
- 62 039 00** Wooden skewers, 10 cm long, ø 3 mm

## Additionally you need:

- Dye vessel
- Water
- Copy paper

## Instructions:

- 1** Fill a container, e.g. plastic bucket, with cold water. The egg to be marbled must be completely immersed. Skewer the plastic egg and shake the paint well out (approx. 30 sec).
- 2** Always drip the paint close to the water surface.
- 3** Once the paint has dripped into the water, use immediately a wooden skewer to draw the marbling pattern.
- 4** Dip the egg slowly into the water by a circular motion, leave it there for a while and then quickly pull it out.
- 5** Before taking it out blow briefly the water surface, so the paint will flow along the edge. Let the eggs dry vertically on a skewer. After 15 to 30 minutes, the paint is dust-dry.
- 6** The paint residues remaining on the water surface can be quickly removed with a sheet of paper (with the edge of the paper). For the next marbling, the water must be clean of residues. In case of heavy soiling, use fresh, clean water.
