Snowy candle

WWW.RAYHER.COM

Used items:

31 404 00	Pillar candle	1 piece
31 042 02	Wax pellets, white	150 g

Additionally you need:

89 389 00	Wax melting pot 1l
38 032 00	Metallic spatula with a flexible blade tip
	Egg whisk
	Spoon
	A vessel intended for pouring of a warm wax at 70°C

Instructions:

- Put the wax pellets in a wax melting pot and melt them in a water-bath at 60-70°C
 - Pour a small amount of the melted wax in a vessel and stir it with the egg whisk until a white wax-foam forms, then press it with a spatula against the candle.
 - Start at the upper rim of the candle. The candle tips and the lower rim are going to be decorated at the end.
 - Spread quickly the wax-foam whilst an irregular structure is going to appear which you can tap with a spatula. Let the wax cool down slowly in the vessel, pour some hot wax over it, mix it with the spatula and work it out quickly.
 - Take the cooled wax with a spoon from the vessel out and melt it down again.
 - Lay the egg whisk in between for cleansing in the wax melting pot. Repeat it until the side of the candle is decorated, then decorate the tips.
 - At the end, fill the lower rim and let it cool down.
- Tip** If you want to add some sequins, then you should use aluminium or glass sequins since the candle is going to burn.
- 8** Clean the vessel carefully with a hot air blower 89 199 00 or with a hair dryer and put the rests of the melted wax back into the wax melting pot for moulding.
