**CRAFTING TIP**

GB

Your slime. Your style.  
Mix your very own one.

[WWW.RAYHER.COM](http://WWW.RAYHER.COM)

## Basic recipe for 240 – 250 g of Slime

– there are of course many other possibilities,  
but this is without a doubt a successful one:

### The craft glue of Rayer, for e.g.:

- 33 407 00** Rayher's craft glue, 125 g  
or
- 33 408 00** Rayher's craft glue, 240 g  
or
- 33 409 00** Rayher's craft glue, 500 g

+ **Activator:** Sodium bicarbonate, Multi-purpose contact lens solution

### For cool slime-designs of your choice:

- 34 246 ...** soap dyes
- 34 247 000 – 34 256 000 + 34 365 000 + 34 366 000** Soap fragrance
- 30 187 ... – 30 190 ...** Glitter-Glue
- 39 407 000 – 39 417 000** Spangle

### Additionally you need:

- 61 216 31** Craft wooden sticks
- 39 569 000** Storage container
- Mixing bowl
- Spoon

## Instructions:

**1** Put 240 - 250 g of the craft glue in a bowl, and add dropwise your favourite colour and fragrance. We recommend you the soap dyes and soap fragrance of Rayer, since they are dermatologically tested. Do not pour too much, just a few drops are sufficient. If you wish, you can sprinkle some spangles, Glitter-Glue or the like.

**TIP:** If you apply for e.g. the laminating adhesive instead of the craft glue, your slime will be more creamy almost as a chewing gum.

**2** Add 1 tablespoon of sodium bicarbonate – stir thoroughly.

**3** Now add 1-3 tablespoons of multi-purpose contact lens solution. **Important:** add always in small quantities by stirring constantly. You will notice how the slime grows, and the mixture becomes stiff and sticky while sticking to the craft wooden stick.

**4** Now, you can knead the slime with your hands. If it is too sticky, first pour some multi-purpose contact lens solution onto your hands to avoid that the slime sticks too much to them.

**5** Done!

### Recommendation:

Rather mix less first, and then add gradually.

Let your slime rest for a while – airtight packed – so that it bonds optimally. After a longer rest period or when water has settled after a while, simply knead the slime again with your hands until it becomes smooth and warm.

**Just try it out – be creative and let yourself be surprised!**  
There is no right or wrong here.

### WARNING! Please note:

- Never allow young children to make a slime without supervision
- Do not use any product that you are sensitive to (see ingredients on products)
- Never put slime and ingredients in your mouth
- Always label containers in which slime is stored, and keep out of the reach of small children and pets
- Do not bring it in contact with foodstuffs
- Do not heat it up or freeze
- After making the slime or playing with it, wash hands thoroughly with soap
